ABOUT ME

Software Engineering graduate (Air University, 2026) and Junior Full Stack Developer. Together with my project partner, I built a customization and ordering platform for a US-based client, working on both the front end (React.js) and the back end (Firebase Firestore). It replaced the client's slow, email-based ordering process with a real-time 3D design preview and direct online orders.

I communicate comfortably in English (IELTS Academic, CEFR B2) and have worked with an international client across time zones. I am looking for a Junior Full Stack / Front-End Developer role or internship where I can contribute to real products and keep growing.

PROJECTS

FULL STACK DEVELOPER (FINAL YEAR PROJECT) – FLYBOYS WAREHOUSE, US-BASED CLIENT – OCT 2025 – MAY 2026 – MULTAN, PAKISTAN (REMOTE CLIENT)

- Co-developed, in a two-person team, a web platform for a US custom fighter-pilot-gear company that replaced a slow, email-based ordering process
- Front end: built the customization and ordering interface with React.js and React Router
- Built a real-time 3D design preview where customers create and see their personalised logo instantly (Cloudinary)
- Back end: designed the Firebase Firestore database and implemented size selection and direct online ordering
- Worked with the client in English across time zones, from requirements and UI design through development, testing and delivery
